LIBRARY
JAN 30 1961
CURRENT SERIAL RECORDS

January 24, 1961

CORN, SORGHUM GRAIN AND WHEAT STOCKS CONTINUE RECORD LEVELS

Stocks of corn, sorghum grain and wheat in all positions on January 1 continued at record levels with corn stocks of 4,700 million bushels moving 7 percent above the previous record of a year earlier. Sorghum grain stocks of 1,032 million bushels pushed above the 1 billion bushel mark for the first time and were nearly a fifth above the previous record level of January 1, 1960. Wheat stocks continued to establish record January 1 levels for the third successive year with a total of 2,066 million bushels, 10 percent above a year earlier. Oats stocks were more than a tenth larger than the previous year but below average. Barley stocks were moderately below but rye stocks jumped sharply above January 1 last year. Holdings of soybeans declined from the level of the previous year. Stocks of feed grains--corn, oats, barley and sorghum grain--totaled 183 million tons, 8 percent above the previous record of 169 million tons in storage January 1, 1960.

Wheat stocks at 2,066 million bushels in all storage positions were a January 1 record for the third successive year-- 10 percent above a year earlier and 60 percent above average. The large stocks result from carryover of old crops nearly equalling the large 1960 production. Disappearance of wheat from all storage positions during the October-December quarter was 279 million bushels, about 9 percent greater than the same quarter a year earlier.

Stocks showed an increase over a year earlier in farm storage, commercial storage, and in Government owned or controlled storage. In Kansas, holdings were well over one-fourth the United States total and also increased about one-tenth from a year earlier. Nearly three-fourths of the United States stocks were either Government owned or under price support.

Rye stocks of 25.7 million bushels stored in all positions on October 1 were the largest since 1956 for that date. Total stocks were a fourth above January 1 a year ago and average, with about 14 percent of the stocks owned by CCC or under CCC loan. Off-farm stocks of 14.3 million bushels were a tenth above a year ago and a fifth above average. Farm stocks at 11.4 million bushels were almost three-fifths above the previous January 1, and nearly two-fifths above average.

Corn in all storage positions on January 1 totaled a record 4,700 million bushels, 307 million bushels above a year ago. Farm stocks at 3,060 million bushels were slightly above January 1, 1960 and stocks in interior mills, elevators and warehouses at 952 million bushels were up 20 percent. Nearly nine-

GrLg 11-1 (1-61) — Washington, D. C.

tenths of the off-farm stocks were owned by CCC and more than a tenth of the farm stocks were under Government loan including reseal and purchase agreement. Disappearance during the October-December quarter was 1,038 million bushels compared with 1,046 million during the last quarter of 1959.

Oats stocks in all storage positions on January 1 totaled 851 million bushels and were 10 percent larger than a year earlier but 6 percent below average for the date. January 1 farm stocks, at 766 million bushels, were 10 percent above a year ago but 7 percent below average. Off-farm storage of 85 million bushels was 12 percent larger than a year earlier. Oats under loan or owned by CCC accounted for about 5 percent of the total stocks this year. Disappearance of oats during the October-December quarter reached 234 million bushels compared with 233 million during the same quarter a year earlier.

Barley stored in all positions on January 1 amounted to 352 million bushels, 10 million bushels below holdings a year earlier. Stocks on farms were 202 million bushels, slightly above January 1, 1960. Off-farm stocks at 150 million bushels were down 8 percent from a year earlier. About a third of the total January 1 stocks were under loan to or owned by CCC, slightly more than a year ago. Disappearance of barley from all storage positions during the October-December quarter was 116 million bushels compared with 102 million during the same period in 1959.

Sorghum grain stocks in all positions on January 1, at 1,032 million bushels, were 18 percent above the previous record holdings of a year earlier. Off-farm stocks amounted to 815 million bushels with about four-fifths of these stocks under loan or owned by CCC. Farm stocks totaled a record 216 million bushels, 11 percent above a year ago and two and one-half times larger than average. Disappearance of sorghum grain during the October-December quarter was 188 million bushels compared with 218 million bushels for the same period a year earlier.

Soybean stocks of 424 million bushels in all storage positions on January 1 were the third highest of record for the date. The current stocks are exceeded only by the 452 million of a year ago and the 471 million bushels on hand January 1, 1959. Most of the reduction from last year was in farm storage as the off-farm storage was nearly as large as a year earlier.

Stocks on January 1 indicated a disappearance during the October-December quarter of 157 million bushels from a supply of 582 million bushels (carryover of 23.2 million plus 1960 production of 558.8 million bushels). During the period 110 million bushels were processed for oil and about 55 million bushels were exported. This totals 165 million bushels or a difference of about 8 million bushels between indicated and actual disappearance. In most years such indicated differences on January 1 have disappeared by the end of the marketing year when the final check is made.

Flaxseed stocks in all storage positions on January 1 totaled 21.6 million bushels. This is about one-third above the record low stocks of a year ago. Off-farm stocks were 38 percent above January 1, 1960 while farm stocks were 31 percent larger.

January 1 stocks indicate a disappearance during the half-year July-December, 1960 of 12.5 million bushels from a supply of 34.1 million bushels (carryover of 3.0 million plus the 1960 production of 31.1 million bushels). During the period, 9.5 million bushels were processed and exports totaled 3.4 million bushels. This accounts for 12.9 million bushels.

2/ Off-farm total plus farm stocks.

The data in this report are assembled by the Crop Reporting Board, bringing together stocks of soybeans at processing plants as reported by the Census Bureau; CCC owned grains reported by the Grain Branch of Commodity Stabilization Service as stored in bins, ships, and other storages under CCC control; estimates of the Crop Reporting Board for stocks on farms and at mills, elevators, warehouses, and terminals.

Off-Farm Grain Storage Capacity

Total capacity of off-farm commercial grain storage establishments on January 1, 1961 in the United States was estimated at 4,993 million bushels. This represents the first publication of grain storage capacity data by States by the Crop Reporting Board since 1943. At that time, grain storage capacity was estimated at 1,667 million bushels. Periodic reports on grain storage capacity prepared by the Department of Agriculture show moderate capacity increases through the 1940's to a total of 2,176 million bushels in 1951. Significant capacity increases occurred during the 1950's, reaching a total of 2,874 million bushels in 1954 and 3,501 million during 1957. However, the most significant change in capacity took place during the three-year span of 1958-60, increasing an average of nearly one-half billion bushels annually.

The capacity data, by States, include all elevators, warehouses, terminals, merchant mills, ships under private control, other storages and oilseed crushers which store grains. They exclude CCC bins, mothball ships under Government control used to store grain, warehouses used to store only rice or peanuts, oilseed crushers processing only cottonseed or peanuts, tobacco warehouses, seed warehouses and storages that handle only dry beans or dry peas.

Estimated Capacity of Off-Farm Grain Storage Facilities, by States, January 1, 1961
